

EDUCATING FAO

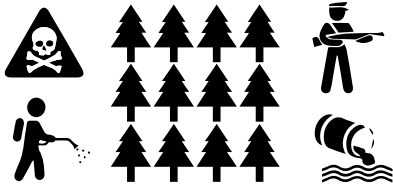

Plantations are not forests

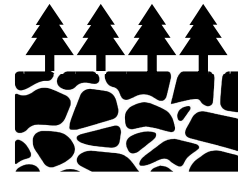

Forests cannot be reduced to forestry

Planting tree monocultures does not secure the future

Plantations do not protect or rehabilitate water and soils

Forests are not just a collection of trees that store carbon

Biomass plantations do not benefit people and forests

Industrial tree plantations increase harassment and sexual violence against women

Sustainable Forest Management (SFM) does not stop forest loss

The plantation industry is not a good advisor for taking care of forests

Forest-dependent communities know how to take care of forests

What else do you think FAO should learn about forests?
