
[GE tree research: A country by country overview - 2014 update](#)

(Solo disponible en inglés) Research on genetically engineered trees is being –or has been carried out in a number of countries, but the public is either unaware about this or has been led to believe that this is a positive scientific development for the “improvement” of trees. What follows is a short summary of the situation in those countries where GE tree research has been detected, with links to [the information sheets produced on all those countries](#).
